Our five key values set us apart from our competition.

We Listen.

Communication is at the heart of successful engineering, and the starting point for Mallett Technology. More than blueprints, formulas, and computer models, communication helps us understand your goals fully, define all of the issues clearly, and map out the right process to arrive at the best—and most suitable—solution.

We Work As a Team.

We assign engineers and designers with the expertise that's best-suited to the specific needs of your project, and they'll remain your engineering team until your project is completed. Having the same team consistently working on your project ensures productivity and accuracy. Mallett Technology's team-based structure eliminates the "strong start, weak finish" syndrome that can occur when the right resources aren't in place.

We're Right At Home.

Mallett Technology has been operating since the 1970s, and our Principals have been working in the engineering industry for more than 40 years. Our experience is unmatched and it's vital in a global market with increasing demands to go to market faster, better, and more cost-efficiently than ever before.

We're Full Service.

We work with our clients as partners, not just providers. Our wealth of industry experience combined with the world's leading engineering tools enables us to offer an unparalleled and full spectrum of services. We've worked with customers large and small through all stages of product development. From the start, we'll work very closely with your team to identify the most targeted, effective approach. The resulting project scope may be focused and immediate, or it may be long-term and process-oriented. Generally, we work in a highly collaborative style, communicating early and often with your team. If the situation demands it, we'll work independently to deliver solutions if your team is overloaded, or if you're simply in need of a fresh perspective. We're not "one size fits all." Each situation is unique; we strive to identify your true needs and address them as efficiently as possible.

We Don't Shy Away from a Tough Project.

At Mallett Technology, we specialize in solving complex and urgent problems. Our industrial experience is diverse and spans many fields—nuclear power, industrial equipment, defense, consumer products, transportation, and aerospace. With an abundance of software and computing power, we're able to simulate large and complex systems quickly. Using the most advanced solution techniques available, we capture the true physics of the problem. We take pride in delivering accurate, timely, effective results for even the most challenging situations.
